Windows 10 - How to boot the system from USB drive/CD-ROM on the G11CD Desktop?

If you want to boot the system from USB drive/CD-ROM, you need to enter BIOS to set up configuration by holding the '**Delete**' key or '**F8**' key (choose '**Enter Setup**' when the menu appears) after powering on the unit.

If it's difficult to catch and the system boots to Windows instead, **hold the Shift key** while you restart Windows to enter '**Advanced startup**' and look under the 'troubleshoot/advanced options for the '**UEFI Firmware settings**' to enter the BIOS.

1. Once you enter the BIOS configuration, please go to tab **[BOOT]**.
2. Select '**Secure Boot**' and change the 'OS Type' setting to '**Other OS**' to disable secure boot. Hit the '**ESC**' key to return to the previous Boot menu screen.

3. Also, under the boot menu, select '**CSM (Compatibility Support Module)**' and confirm the 'Launch CSM' setting is on '**Auto**' (which should be the default) or that it is Enabled.

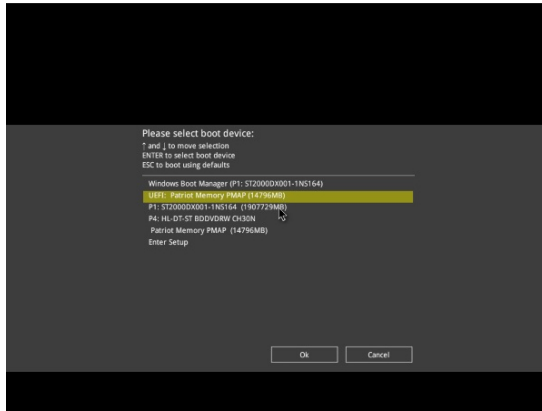

4. Make sure the USB drive or CD/DVD disk you want to boot to is inserted/installed before pressing F10 to save and exit the bios settings, otherwise, your boot device/disk may not be detected.

5. You can boot the system from USB drive/CD-ROM by the following three methods. Be aware that you would see 2 different boot options for your boot device so make sure to select the correct one or try **both UEFI and non-UEFI boot options** if you're not sure which is correct.

(1) Enter BIOS -> Select **[Boot]** -> Select USB drive/CD-ROM under the **[Boot Override]** options

(2) Enter BIOS -> Select **[Boot]** -> Change the boot device priority so that your USB drive/CD-ROM is the first boot device. Save and exit bios to keep this setting but you may want to change it back later to avoid booting to external devices/disks accidentally when they are plugged in/installed.

(3) Hold and press the **[F8]** key while you press the power button to turn on the system. You can select either UEFI or non-UEFI boot device from the list.

Product : **G11CD**

Category : **USB/ HDMI/ Connection port, Windows Setting/ Operation**

Type : **Product Knowledge**
